## Abstract of JP2002221485

**PROBLEM TO BE SOLVED:** To provide a micro chip to allow miniaturizing a reaction detecting apparatus using the micro chip. **SOLUTION:** The micro chip 12 has a radiating means 12d for radiating a light generated in the predetermined region of a flowing path 25a of the micro chip 12 to the predetermined position outside the micro chip. An optical path length in the predetermined region or a length of the predetermined region is longer than a width and a depth of the flowing path.
